The recently established research group of **Dr. Matthias Drosten** at the **Centro de Investigación del Cáncer in Salamanca** is looking for a highly motivated

## Postdoctoral Research Fellow

for a AECC-funded project. The position is available for **3 years** starting **December 1, 2021**.

The laboratory focuses on the identification and validation of novel therapeutic targets in lung cancer driven by KRAS oncogenes using a combination of molecular techniques and in vivo models. The project focuses on the identification of novel therapeutic targets based on the characterization of the crosstalk between KRAS-mutant lung tumor cells and the microenvironment employing state-of-the-art techniques including genetically engineered mouse models.

### Related information:

- Simón-Carrasco et al, Genes & Dev 2017;31:1456-1468

### Requirements:

- Excellent doctoral degree in Life/Health Sciences
- Strong background in cancer research, at least 1 first-author paper
- Experience in molecular biology, cell culture and mouse models
- Strong expertise in flow cytometry highly desirable
- Spanish and English language proficiency
- Ability to work independently and to organize the work, proactive attitude
- Excellent interpersonal, networking and communication skills

### What we offer:

- Fully funded position for three years, available **December 1, 2021** (annual salary approx. 27.300€)
- An international, vibrant, highly stimulating research environment
- State-of-the-art facilities and infrastructure
- Research center in walking distance from the UNESCO world heritage city center of Salamanca
